WHAT IS

GITHUB?

INFORMATION
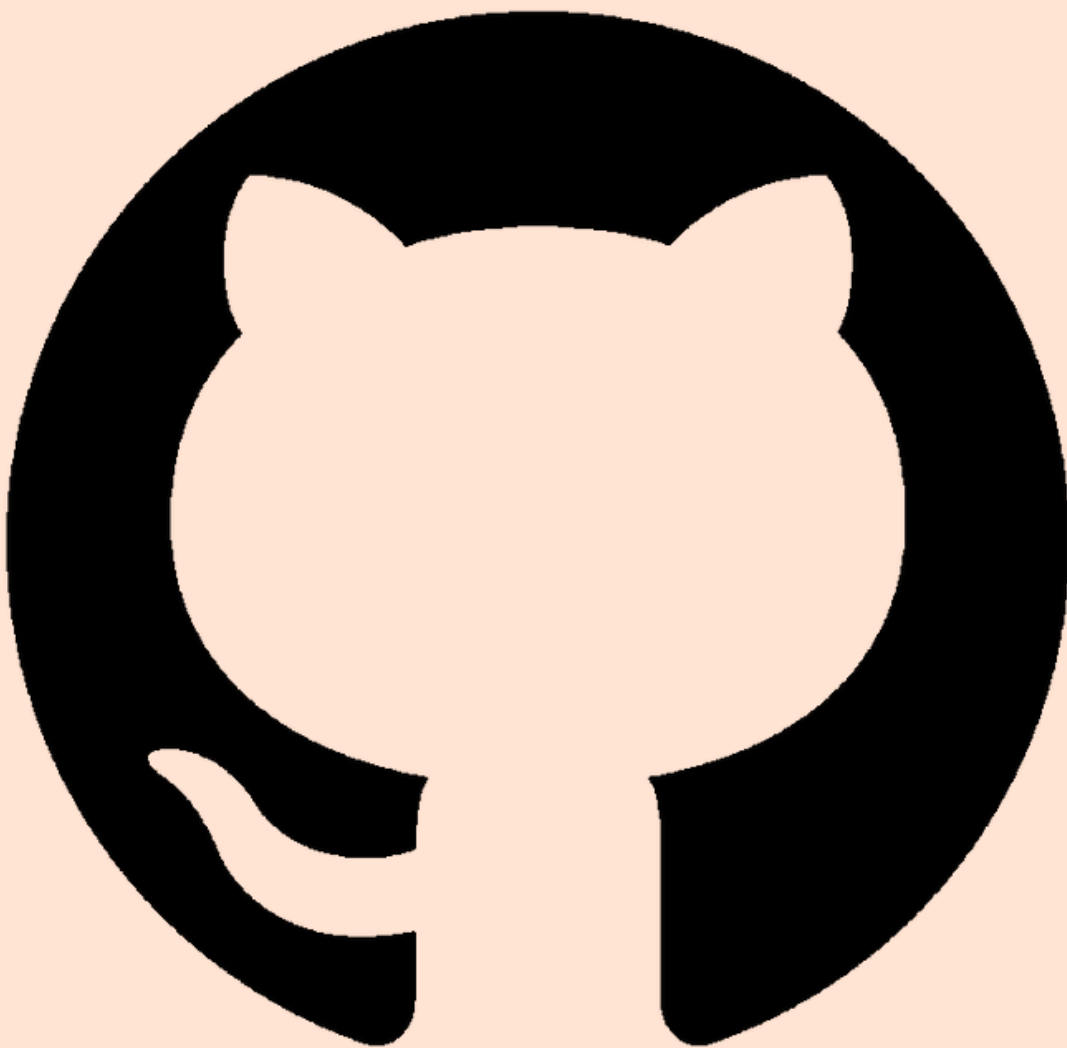

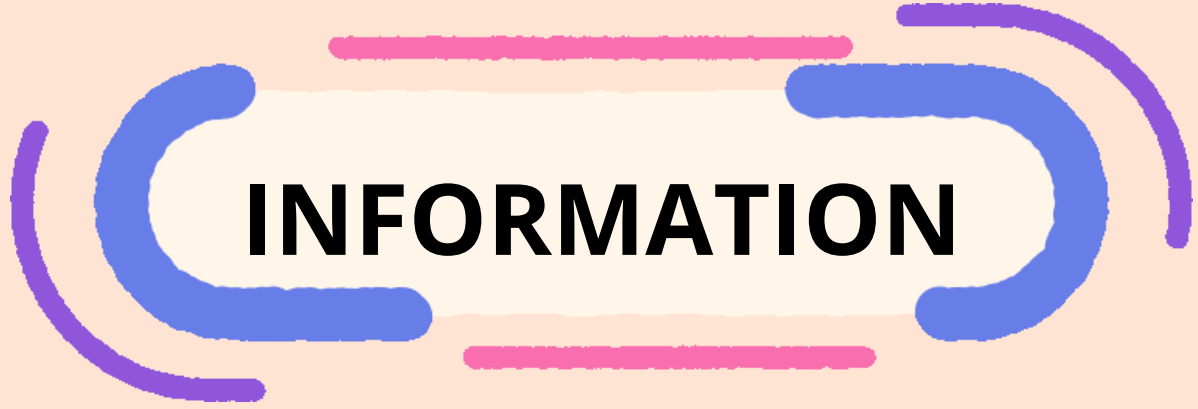

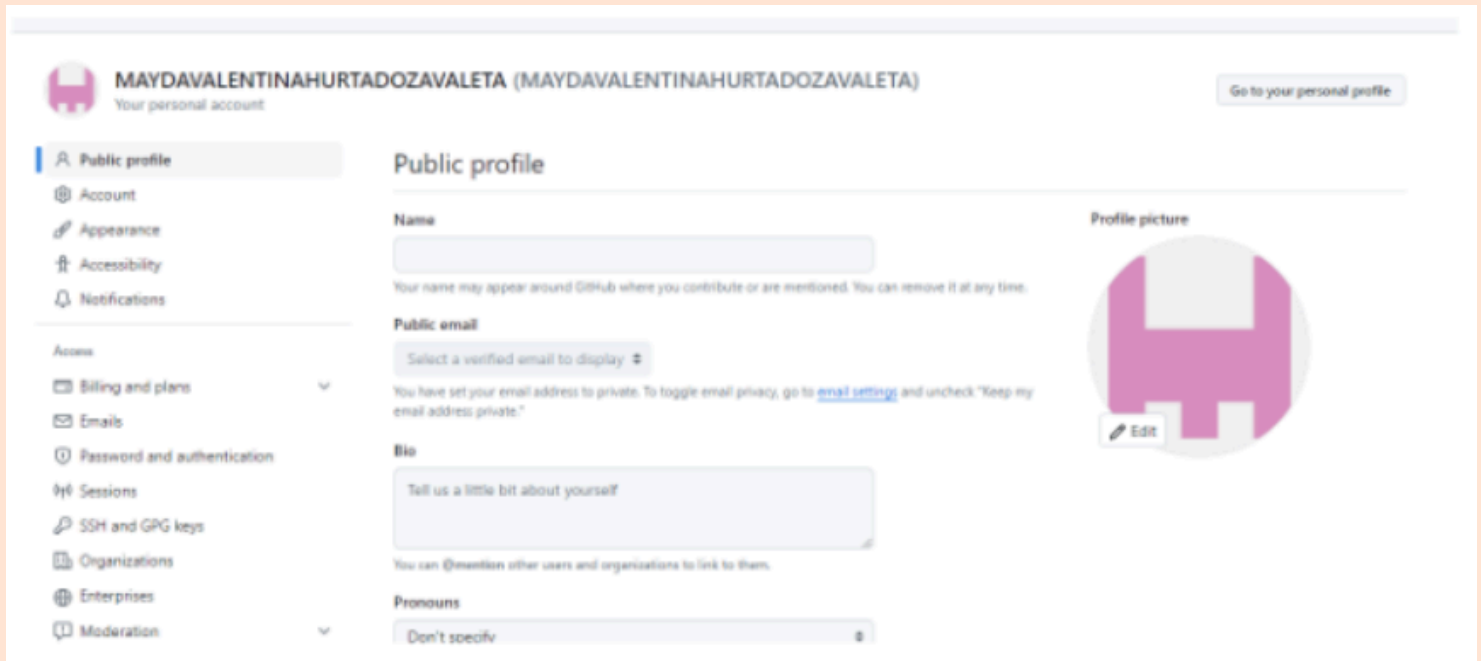

It is one of the main platforms for creating open projects of tools and applications, and is characterized above all by its collaborative features that help everyone to contribute their bit to improve the code.

It is used to host projects using the Git version control system. It is mainly used for creating source code for computer programs.

when you enter you get this

Conclusion

Although GitHub is primarily known within the software engineering community, it can be used in a variety of different industries. Any team or company working on different projects that require development in the form of files can use this service.

WHO CREATE?

Github was developed by Chris Wanstrath, P. J. Hyett, Tom Preston-Werner and Scott Chacon using Ruby on Rails, and started in 2008. Although the company, Github, Inc, had been in existence since 2007.

On February 24, 2009, the GitHub team announced in a talk at Yahoo! headquarters that in their first year they had amassed 46,000 public repositories.
